hohuyblon@gmail.com | linkedin.com/in/builtbyhuy | github.com/builtbyhuy | Hanoi, Vietnam

PROFESSIONAL SUMMARY

Hands-on software and automation practitioner since August 2023 across full-stack applications, APIs, business systems, and applied-AI integrations. Builds and debugs bounded features and workflows, checks failure paths, and documents acceptance and handoff. Seeking legitimate paid work across Software Engineer, Full-Stack, Backend/API, and Automation/Integration roles.

CORE COMPETENCIES

Full-stack applications

APIs and webhooks

Testing and debugging

Automation and data workflows

Applied-AI integrations

Git and GitHub

Service-event design

Documentation and handoff

WORK EXPERIENCE

Independent Software and Automation Work

August 2023 onward

Software and Automation Practitioner

Hanoi, Vietnam

- Built and debugged full-stack applications, APIs, Airtable systems, n8n/Make automations, CRM/data flows, and LLM integrations.
- Built outbound workflow components for research, qualification, draft preparation, approval, and activity logging with human review before sending.
- Built repeatable business-data analysis and reporting workflows using Odoo and spreadsheet data, source tracking, validation, and Excel/HTML/PDF outputs.
- Built a private workforce attendance application; employer identity, deployment scale, adoption, and financial outcomes are not claimed here.

MAST

Six-month project

Six-month project

Automotive parts company

- Created AI agents for inventory-turnover reporting, helping management see long-standing inventory issues and begin resolving them.
- Contributed to measured results of a 20% reduction in purchasing costs and a 10% increase in net profit; figures are user-attested and not independently audited.
- Coordinated agents supporting import/export paperwork, customs-declaration preparation, and trade documentation.

2S Phúc Lợi

Six-month project

Six-month project

Automotive service workshop

- Built a mini app to manage vehicle entries and exits using images.

PROJECTS

Keyloop Software Engineer - application proof-of-value demo

Job-specific case study

Created a six-slide case study translating the real 2S vehicle-entry/exit workflow into a proposed service-event design with validation, deduplication, an API boundary, and an audit trail. Real evidence, proposed role adaptation, and independent sample scope are separated; no Keyloop internal data or client production outcome is claimed.

Service-event design, APIs, validation, auditability

SkillArena

Independent product

Built an AI-assisted sales-practice application with playbook setup, scenario simulation, transcript-backed debriefs, drills, rematches, demo providers, responsive interfaces, and unit/E2E test paths. No commercial adoption or client result is claimed.

Next.js, React, TypeScript, Tailwind CSS

Webhook-to-CRM Reliability Boundary Independent technical sample

Implemented webhook validation and normalization, idempotency, duplicate suppression, changed-payload conflict detection, bounded retries, and explicit failure handling. The approved sample uses fictional input and simulated CRM behavior; it is not a client production deployment.

Python, HMAC, SQLite, webhooks

python-docx-ng Merged open-source contribution

Fixed quote-sensitive style lookups by binding XPath variables and adding regression coverage. The upstream maintainer reviewed and merged PR 131; this is one accepted contribution, not a maintainer role or client result.

Python, XPath, regression tests

Proofline Release Review Independent frontend sample

Built a responsive release-review interface with ready, loading, empty, and recoverable-error states, keyboard focus and reduced-motion behavior. Do not claim WCAG compliance.

React, responsive UI, browser tests

EDUCATION

Human Resources Management studies **RMIT University Vietnam** Coursework completed; final results pending
No degree award or graduation date is claimed.

CERTIFICATIONS

AI Agent Development and Automation The Real World January 2022 - January 2025

SKILLS

Languages and frameworks: TypeScript, JavaScript, Python, React, Next.js, HTML/CSS
Integrations and workflows: API integration, n8n, Make, Airtable, webhooks, CRM/data workflows, Odoo reporting
Engineering practice: Testing, debugging, Git, applied-AI integrations, spreadsheet validation
Languages: Vietnamese: native/strong; English: fluent
